TRADING MANAGEMENT SYSTEM

Bawabah 's Trading Management system enables trading specialists to personalize their decision logic for automated trading while at the same time monitoring and regulating the compliance of each trade in real time. Specialists work from a graphical work bench to rapidly develop, update, test, and deploy trading rules, business

processes, and algorithms.

An individual's trading logic can be published for use of others. A rule-engine module running on corporate servers monitors compliance by watching over all transactions in real time.
